ABSTRACT

The present deliverable is the 2nd dissemination impact assessment report, which outlines the dissemination activities and events that took place throughout the project's lifecycle.

1 Introduction

This document is the second version of the ALLIANCE dissemination impact assessment report. It outlines in detail the completed dissemination activities of the project's 30-month duration. Each activity is reported by: the main involved partner, the title and promotional material, the time period, the place, the type and size of audience and the addressed countries. Also, the activities and the persons reached are clustered and presented in eleven and nine categories, respectively.

1.1 Project overview

ALLIANCE aims at developing advanced research and higher education institution in the field of smart interconnecting sustainable transport networks in Latvia, by linking the Transport and Telecommunication Institute – TTI with two internationally recognized research entities – University of Thessaly – UTH, Greece and Fraunhofer Institute for Factory Operation and Automation – Fraunhofer, Germany. Close collaboration of TTI with UTH and Fraunhofer will enable the achievement of the goals through the following activities:

- Organization of young researchers' seminars.
- Organization of workshops.
- Organization of summer schools for trainers and young researchers.
- Development of educational programme for graduate and post-graduate students.
- Development of training programme for trainers and practitioners.
- Development of a Lifelong Education (LLE) program with e-learning courses.
- Provision of grants for participation as authors of peer reviewed publications in conferences.
- Facilitation of Short-Term Staff Exchanges (STSE's) with the aim of international collaboration, mainly publications.
- Establishment of a guidance strategy for preparing scientific publications.
- Establishment of a Virtual Research Compliance Office (V-RCO) for guidance through the whole process of students' research.

The overall methodology of the project is built around the analysis of the needs of Latvia and the surrounding region of the Baltic sea (Lithuania, Estonia, Poland) on knowledge gain about intermodal transportation networks and the development of the tools to attain this knowledge, providing at the same time excellence and innovation capacity. The analysis to be conducted during the first stages of the project, steps on the overarching relations among policy makers, industry and education/research.

Structured around three main pillars, organizational/governance, operational/services and service quality/customer satisfaction, ALLIANCE will deliver a coherent educational/training program, addressed to enhancing the knowledge of current and future researchers and professionals offering their services in Latvia and the wider region.

The expected impacts on the overall research and innovation potential of TTI and Latvian research community will be of high importance and TTI will benefit from ALLIANCE by:

- Improving its knowledge in methodologies for preparing, writing and publishing scientific papers.
- Strengthening its research capacity.
- Establishing international research teams in specific areas of interest.
- Generating new innovative ideas for future research work through the project's activities.
- Setting up the fundamentals for the young generation of researchers.
- Being integrated in a number of existing international transportation research networks.
- Being incorporated in the European research system of transport and logistics.

In addition, the cooperation of TTI with UTH and Fraunhofer will induce benefits into several domains of everyday life at regional, national and international scope. New bases will be established concerning knowledge transfer procedures, education and interdepartmental collaboration amongst research institutes. The innovative organizational framework, which will be structured for this purpose during the project, is expected to constitute a best practice application with tangible and well estimated progress results, which will be disseminated and communicated through social events to the research community and to the respective business sector as well.

Lastly, an important benefit will be the configuration of an integrated framework pertaining to the knowledge transfer techniques and the generic upgrading of the educational system with use of networking, staff exchange, webinars and other knowledge transfer methods and techniques based on a well-structured and well-tried schedule.

2 Dissemination impact assessment

2.1 Overview of dissemination activities

In Table 1 and Table 2 the dissemination activities and the persons reached are grouped and presented in eleven and nine categories, respectively.

Table 1: Summary of dissemination activities

No.	Categories of dissemination activities	Number of relative activities
1	Organization of a Workshop	10
2	Press release	16
3	Non-scientific and non-peer-reviewed publication (popularized publication)	9
4	Flyer	1
5	Training	8
6	Social media	4
7	Website	1
8	Participation to a Conference	19
9	Participation to a Workshop	5
10	Participation to an Event other than a Conference or a Workshop	8
11	Other	10
Total		91

Table 2: Summary of persons reached

No.	Categories of persons reached	Estimated number of persons reached
1	Scientific community (higher education, research)	4,550
2	Industry	980
3	Civil society	350
4	General public	580
5	Policy makers	920
6	Media	150
7	Investors	20

No.	Categories of persons reached	Estimated number of persons reached
8	Customers	20
9	Other	250
	Total	7,820

2.2 Dissemination events

During the project's lifecycle, ALLIANCE was promoted through a large number of events that were organized or supported by the Consortium. Also, partners participated in other external events, and promoted the project by giving presentations referring to ALLIANCE or distributing the official dissemination material, i.e. leaflets, etc. In Table 3, the main dissemination events of this period are presented.

Table 3: Dissemination events

No.	Activity	Main Leader	Title/promotional material	Date/period	Place	Type of audience	Size of audience	Countries addressed

The overall progress of the dissemination events of ALLIANCE project is presented in Figure 1. It is remarkable that the number of these events is significantly increasing over time, validating the great effort that the Consortium members make to organize, support or get involved in several activities and actions for the promotion of the project.

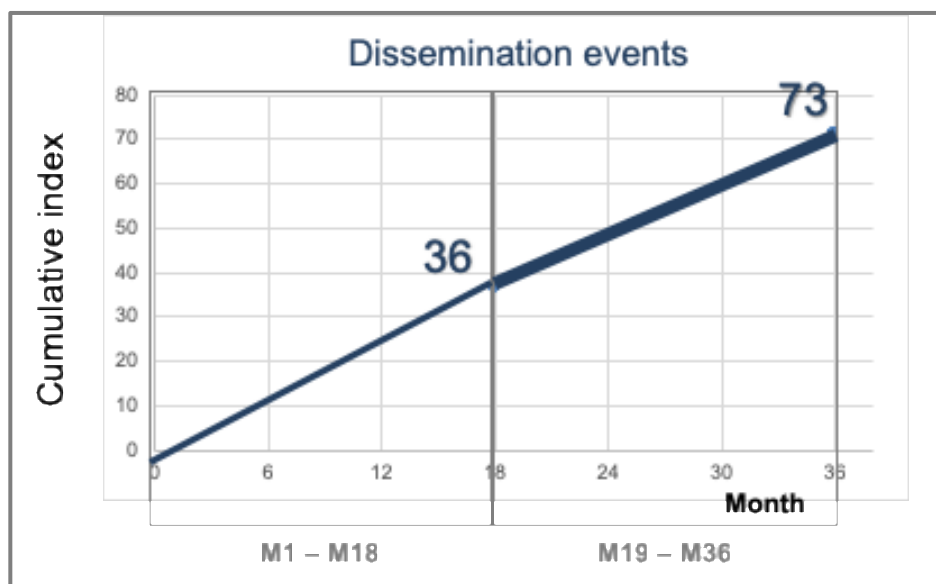

Figure 1: Progress of dissemination events throughout the project's lifecycle
